+++++

#TECHNOLOGIES

CARBON PERFORMANCE

Carbon Performance: Carbon fiber based fabrics significantly improve physical performances: favoring thermo-regulation, reduction of the concentration of lactic acid by 12%, lowering heart rate by 4 beats per minute by activating blood flow and oxygen transport to cells.

SKIN PROTECTION

Skin Protection : Skin-Protection technology is positioned on the most exposed areas thus offering 40% superior abrasion resistance to a classic fabric, which will protect your skin in case of a fall.

EASY DRY

Easy Dry : The fabric structure allows the evacuation of perspiration towards the outside of the garment where it will evaporate more quickly.

SUPER LIGHT

Superlight : Fabrics used for their light weight in order to produce light and more compactible products.

VENTILATION

Ventilation : Fabrics whose technical properties and positioning favor the regulation of temperature during effort.

THERMO REGULATION

Thermoregulation : Fabrics with properties favoring constant body temperature whatever the exterior climate conditions (hot or cold).

AERO FIT

Aero Fit : The Aero Fit cut allows a significant improvement of performances thanks to the application of specific designs and a choice of light and flexible fabrics for a more body fitting cut. Aerodynamics is therefore improved without neglecting comfort.

3D ANATOMICAL FIT

3D Anatomical Fit : Cut and assembly of fabrics are based on body positioning studies on cyclists in movement with the goal of guarantying maximal freedom of movement and comfort. Perfectly adjusted to the body thanks to preformed elements, the 3D anatomic fit guaranties optimal aerodynamics and performance.

FITTING

Easy Fit : The combination of flexible and non-exclusive fit fabrics allows products benefitting from this technology to seduce cyclists wishing for larger and looser fits.

WOMEN FIT

Elle : Label which guaranties products developped specifically for women with regard to their demands and morphology. The cut, function and design of the products are specific and bring comfort and performance that are essential for cycling pleasure.

ANATOMICAL PAD

Anatomical Pad : 3D construction for multidirectional elasticity guarantying a greater ease of movement. The different volumes and densities reduce discomfort in pressure zones and insure optimal comfort.

HIGH VISIBILITY

High Visibility : High visibility reflective materials to guaranty your safety in low light.

ANAT GRIP

Anatomical Grip: Next generation elastic, wider and greater flex for increased comfort, made out of preformed fabric and integrated silicone grippers.

365

365 : Products with 365 days a year use.

+++++

#[LM]MENT

The [LM]Ment range was developed to confront the cold and humid climate conditions met in the early season. Its unique laminate structure, water resistant, allows water beading while maintaining high breathability indispensable when the temperature becomes more inclement and the effort more intense. Its innovative construction limits seams for greater efficiency and greater comfort.

#REPLICA

The Replica Range brings forth the original colors of LOOK brand - yellow, red, white and blue - through high-end, lightweight fabrics favoring perspiration evacuation. This range was developed in colaboration with our athletes to answer the most demanding cyclist.
